

2 lives saved in March 2015 with the HeartSine samaritan 500P!

**One in NSW and one in Victoria.
Both gentlemen recovered extremely well.**

What is clear about both of these resuscitations is the benefit of the inherent dynamic CPR technology.

In the first event it was the CPR alone that saved the life. Encouraged by the patented dynamic CPR technology, the 500P insisted that the rescuer pushed harder on the victims sternum, resulting in effective chest compressions throughout the rescue. The lay rescuer said that it was the voice prompts to push harder that made the difference, because this prompted her son to take over the chest compressions. In spite of having no training in CPR, he followed the instructions and saved a life! The survivor now gets a free samaritan 500P to donate to an organisation of his choice under our Forward Hearts program!

On Saturday just past, a cyclist had a cardiac arrest and was also saved with the samaritan 500P. This time it was a shockable rhythm. Before he was at the hospital he was answering questions!

In both of these cases good CPR ensured that there was no neurological damage. That's what the samaritan 500P is all about! Its more than an AED.
